Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
 - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
 - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
 - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Quesnel(6,137,989). The patent to Quesnel teaches the system and method for correctly matching images to the skew of sheets transported through a paper path of a printer as claimed including a pair of registration skew sensors 122 adapted to generate signals representative of skew of a sheet passing thereunder, a controller 29 adapted to receive the signal from the pair of sensors 122 and to generate a corrective print signal as a function thereof so as to cause a corrected image to be placed onto a photoconductive surface 12 that matches the skewed image signals received from the pair of sensors 122 and to transfer the corrected image on the photoconductive surface 12 to the sheet 48 in proper registration on the sheet. See Figs. 1-3, column 2, line 62 through column 3, line 21, and column 5, line 50 through column 6, line 39 in Quesnel for details. With respect to claims 2, 6 and 11, sensors 122 of Quesnel are pre-transfer skew sensors as recited since they detect the position of the sheet prior to the sheet being printed. With respect to claims 3, 4, 7, 8, 12 and 13, sensors 122 qualify as the post transfer skew sensors or duplex registration sensors in the double-side printing operation on the sheet.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
